PTSD DSM V DIAGNOSTIC CRITERIA

Criterion A: Stressor: The person experiences a traumatic event in which both of the following were present:

- The person experienced or witnessed or was confronted with an event or events that involved actual or threatened death or serious injury, or a threat to the physical integrity of self or others
- The person's response involved in intense fear, helplessness, or horror

Criterion B: Intrusive Recollection: The traumatic event is persistently re-experienced in any of the following ways:

- Recurrent and intrusive distressing recollections of the event, including images, thoughts or perceptions
- Recurring distressing dreams of the event
- Acting or feeling as if the traumatic event were recurring (reliving the experience, illusions, hallucinations, dissociative flashback episodes, including on wakening or when intoxicated)
- Intense psychological distress at exposure to internal or external cues that symbolize or resemble an aspect of the traumatic event
- Physiological reactivity on exposure to internal or external cues that symbolize or resemble an aspect of the traumatic event

Criterion C: Avoidant/Numbing: Persistent avoidance of stimuli associated with the trauma and numbing of general responsiveness (not present before the trauma) as indicated by at least three of:

- Efforts to avoid thoughts, feelings or conversations associated with the trauma
- Efforts to avoid activities, places or people that arouse recollections of this trauma
- Inability to recall an important aspect of the trauma
- Markedly diminished interest or participation in significant activities
- Feeling of detachment or estrangement from the others
- Restricted range of effect (unable to have loving feelings)
- Sense of foreshortened future (no expectation of a career, marriage, family, long life)

Criterion D: Hyper-Arousal: Persistent symptoms of increase arousal (not present before the trauma) as indicated by at least two of the following:

- Difficulty falling or staying asleep
- Irritability or outbursts of anger
- Difficulty concentrating
- Hyper vigilance
- Exaggerated startle response

Criterion E: Duration: Symptoms on criterion B, C, D last for more than one month

Criterion F: Functional Significance: The disturbance causes clinically significant distress or impairment in social, occupational or other important areas of functioning
